

(Wind speed & direction, temperature & RH%, pressure, rain, solar radiation)

## All-in-one weather sensors

- Two size versions with different specifications for a wide range of applicartions
- Easy connection, using Modbus-RTU, to third part data loggers and LSI LASTEM's data loggers
- Heated versions (Standard versions only)
- In house ISO17025 accreditate calibration laboratory

**STANDARD SERIES** 

Sensors integrate a unique folded-path sonic anemometer with a multi-element temperature sensor, fast-response capacitive relative humidity sensor, state-of-the-art barometric pressure sensor. Alternative versions are equipped with photodiode radiation sensor or optical rain sensor. The result is a professional grade All-In-One Weather Sensor designed for reliability, longevity, and ease of installation. Two classes of sensors are available: Standard made in aluminum and Compact series made in plastic, with different size and different features concerning the wind measurement. All models can be connected to any LSI LASTEM data logger on serial port COM2 using its Modbus output protocol. All-In-One sensors are particularly suitable for industrial and environmental applications, such as, smart buildings, electric grid, marine coastal and smart cities applications, wherever small devices with low visual impact and not moving parts are required.
